## For Signature Microsoft Teams Rooms

## Why Signature Microsoft Teams Rooms?

A key challenge for the modern workplace is keeping hybrid teams connected. Creating a more inclusive experience for everyone in a hybrid meeting was one of the primary motivations behind Microsoft's development of Signature Teams Rooms.

### **Make meeting equity a reality**

Starting with hands-on research and experimentation initially to support the needs of their own flexible workforce, Signature Microsoft Teams Rooms have emerged as an innovative new way to design hybrid-optimized meeting spaces for everyone. Whether people are in the room or joining from elsewhere, with Signature Microsoft Teams Rooms, everyone gets to be part of the conversation and feel more included, more engaged, and more productive.

### **Bring the vision to life**

These visionary, art-of-the-possible spaces are enabled by a supporting toolbox of room archetypes to suit different organization needs, best practice design guidance, and rigorously tested certified devices.

That's where Jabra comes in. Our Jabra Teams Rooms certified video conferencing solutions are the perfect devices to bring your Signature Microsoft Teams Rooms to life, offering innovative intelligent meeting experiences that enhance online meetings for everyone.

Watch how Microsoft evolved the Signature Microsoft Teams Room concept

Microsoft has installed PanaCast 50 video bars in its meeting rooms around the world to provide a better hybrid meeting room experience.\*

## Why Jabra for your Signature Microsoft Teams Rooms?

Jabra and Microsoft have a long and successful track record of working together, developing innovative, industry-leading experiences and solutions.

### Leading technology innovation

Recognized as the world's leading professional audio brand, Jabra is also now a global video provider, with innovation at the center of everything we do.

### PanaCast 50 Rooms Solutions

Our award-winning PanaCast 50 room solutions are certified for Microsoft Teams Rooms, with Windows and Android™-based options. High-definition video, rich, room-filling sound, and intelligent AI-enabled user experiences ensure every meeting looks, sounds, and feels incredible.

What's more the flexible Jabra PanaCast 50 solution architecture enables updates to enhance functionality and add new features to respond to changing workplace needs.

**Scientifically proven to increase meeting quality and engagement\***

## Bring your teams closer together

### Talking the talk

At Jabra, we don't just sell collaboration solutions - we're also avid users of the technology ourselves.

Not only is Jabra a close partner of Microsoft, we are also a customer. As an early adopter of hybrid working, Teams has become our primary collaboration platform. We have many Signature Microsoft Teams Rooms at our office locations around the world which help keep our teams connected.

Head of Modern Workplace at GN Group

# 1 Get the most from your meeting space with our unique front of room 180° field of view

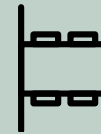

## INCLUSIVE 180° TECHNOLOGY

By delivering a clear, eye-level view of all participants, conversations feel more like face-to-face discussions, making it easier for everyone to feel involved and connected, driving productivity and engagement. And there's no need for additional cameras or audio equipment, saving you cost and complexity.

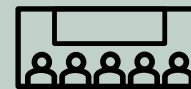

Patented real-time video stitching technology automatically and flawlessly combines the feeds from three, 13-megapixel cameras into a single, Panoramic view of everyone in the room.

For focus or small rooms, the 180° field of view enables you to push the table right up to the wall and still get everyone on camera, to maximize the value of your meeting space.

For medium rooms, our 180° field of view enables you to put the camera closer to meeting room participants and still be sure that everyone will be on screen and experience optimal audio performance.

Our 180° field of view is complemented by the Microsoft Teams Front Row view, which is optimized by Signature Microsoft Teams Rooms to display individual streams of remote participants at eye level, producing more natural eye contact.

## AI-enabled intelligent meetings with feature upgrades

Our world-class built-in AI enabled smart camera technology provides those dialing in remotely with a choice of intelligent viewing options. These enable people to more easily identify individuals in the meeting room, making remote workers feel much more engaged and connected to their colleagues and the conversations.

What's more, this state-of-the-art AI-enabled architecture enables functionality to evolve over time, with new intelligent feature updates to meet changing workplace requirements.

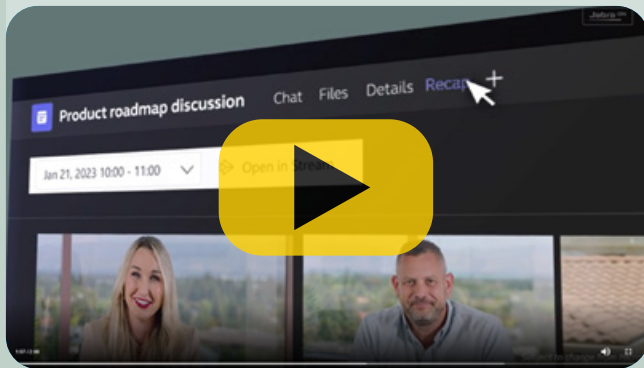

FEATURE	BENEFIT	
 <b>Intelligent Zoom</b>	<p>Uses powerful AI to dynamically adjust and frame in-room meeting participants for optimal collaboration.</p>	<p>In a Signature Microsoft Teams Room, this allows remote participants to see the people on the extreme edges of the room without anyone being cut off, or needing to squeeze uncomfortably together to be seen.</p>
 <b>Dynamic Composition*</b>	<p>Offers a choice of meeting room participant views, including the most recent in-room speakers or close ups of recent speakers with a panoramic view of the room for context.</p>	<p>Providing enhanced views of in-room participants and granting them equitable on-screen real estate improves the ability of all meeting participants to naturally follow and participate in the conversation, boosting collaboration and engagement. The ability to see both the most recent in-room speakers AND a panoramic view of the room delivers a game-changing, inclusive experience that keeps everyone engaged.</p>
 <b>Intelligent Meeting Space</b>	<p>Define virtual meeting space boundaries to only include the people inside the meeting space; ideal for glass-walled and open-plan spaces.</p>	<p>The 180° field of view allows you to see everything in a room. But sometimes you don't want that, and need to limit what is seen. Intelligent Meeting Space enables you to confine your focus to only who and what you want to be visible in your Signature Room.</p>
 <b>Virtual Director</b>	<p>Adjusts the camera view of the room in real-time to focus on the active speakers, helping everyone track the natural flow of the conversation.</p>	<p>Sometimes you just want to focus on the active speaker in the room. Virtual Director automatically adjusts the view to whoever is speaking, helping remote attendees to intuitively follow the meeting.</p>
 <b>Dual-Stream whiteboard*</b>	<p>Share your whiteboard content with our built-in whiteboard content camera, which streams both the content and in-room participants simultaneously.</p>	<p>This brings additional functionality to a Signature room equipped with a whiteboard without having to invest in additional camera hardware.</p>

## Great meetings call for great sound

As you'd expect from the world's leading professional audio brand, Jabra PanaCast 50 solutions offer the premium sound your Signature Rooms deserve.

### Watch Intelligent Speaker in action

### Astounding sound

Hear everyone's words of wisdom in crystal-clear clarity thanks to four powerful speakers which ensure everybody is clearly heard.

### Focus on the sounds that matter

Hear every nuance of the conversation, as eight beamforming microphones with built-in precision voice detection catch every sound and filter out background noise distractions.

### Intelligent Speaker

Thanks to their premium audio quality our video bars were the first front of room devices to work with Microsoft's Intelligent Speaker functionality for Teams Rooms. This enables cutting edge new Teams capabilities like live transcription and recap features\*, thanks to our premium microphones, which help Teams accurately identify individual speakers, enabling a better Intelligent Meeting Recap experience and allowing you to focus on the meeting rather than trying to scribble down meeting minutes.

\* Teams Premium license required

# Solutions for Signature Microsoft Teams Rooms Archetypes
